

## CORPORATE PROFILE

Access Technologies International Inc., “ATI” is an aggressive and innovative company with excellent state of the art technology. It is a privately owned corporation with headquarters in Milwaukee, Wisconsin, USA. Access Technologies International is one of the major innovators in access control systems specializing in the design and manufacture of Access Control and Monitoring Systems for the fast growing Integrated Security Market.

Access Technologies International offers a wide range of powerful Access Control products including:

- **Cards & Readers – ATI, AWID, HID & INDALA**
- **StarAccess1000 SDC Software**

The SA-1000 is an intelligent one door access control panel that meets market requirements for a simple and cost-effective access control panel. It is designed to achieve high security, convenience, reliability, and price competitive.

This user-friendly device has dynamic memory assignment to register up to 5,000 ID Cards and up to 5,000 event transaction buffers. Independent 5 input ports could be connected with various devices such as exit button, door contact, PIR sensor, and fire sensor. Two proximity reader ports for entry and exit allow you to operate Anti-pass back mode. The SA-1000 can be used as not only access control panel but also a network communication via RS232.

The SA-1000 provides an accurate access control for a single door. The SA-1000 access control panel cost-effective solution wherever the Access Control and High Security is required.

- **StarAccess2000 Software**

The SA-2000-II is an intelligent one/two door(s) access control panel that meets market requirements for a simple and cost-effective access control panel. It is designed to achieve high security, convenience, reliability, and price competitive.

This user-friendly device has dynamic memory assignment to register up to 10,000 ID Cards and up to 7,000 event transaction buffers. Independent 4 input ports could be connected with various devices such as exit button, door contact, PIR sensor, and fire sensor. Two proximity reader ports for entry and exit allow you to operate Anti-pass back mode. The SA-2000-II can be used as not only access control panel but also a network communication via RS422/RS232.

All control setting values including ID numbers, inputs/outputs, real-time clock and time schedule, all event transaction reports can be downloaded/uploaded from/to the host computer and front programmable by LCD/Keypads.

The SA-2000-II will provide you an accurate access control for a single door. The 3 LED's indicators will inform you the status of the operating system real time. The SA-2000-II access control panel will give you field proven reliability and cost-effective solution wherever the Access Control and High Security is required.

- **StarAccess®PRO Software**

ATI's StarAccess®PRO software is an economical and feature-rich security system designed for ease of setup and everyday use. Complete with Access Control, Alarm Monitoring and optional Alarm Video integration, it has an advanced feature-set including such items as multi-workstation support, multi-protocol panel communication, user chat and ghost cardholders. For security and reliability it is integrated with Microsoft's SQL Server Database.

The StarAccess®PRO's 32-bit software architecture was designed using Microsoft .Net featuring the latest in data presentation graphical controls. With on-line help, configuring the SA-2000-II access control panel requires little or no training. The StarAccess®PRO system runs under Windows 98, Windows NT, Windows 2000 or Windows XP.

- **Imager® Software**

IMAGER®'s power, ease of use and compatibility with major databases makes it the ideal choice for ID badge construction. It allows quick, efficient and low cost card production.

IMAGER® is in use by organizations worldwide from pre-schools to entire levels of enterprise solutions. Attaching to external databases makes data entry a simple process.

IMAGER® is a true 32 bit Windows-based program, giving you the look and feel you're used to, the ease of use of a mouse, and a short learning curve. You don't have to go through classroom training to construct professional badges.

Unlimited custom card design capabilities let you create different layouts for different functions or departments. You can even have multiple photos on one badge! You can quickly change company names, logos, and graphics on your ID cards. IMAGER®'s allows you to select fields from existing databases for display and manipulation. This is as easy as selecting, which fields are to be used from the existing database.

IMAGER® is network compatible, so you can share information and resources, e.g. printers, throughout the company. Its multilevel password security ensures that only authorized personnel can build or modify a card, or alter database information.

## Markets

Our clients are mainly companies that integrate, install, and sell security systems. ATI has about 135 integrators worldwide. We attract dealers, and integrators by exhibiting our products in security shows and magazines.

**Following is a list of our priority markets:**

- United States of America
- Canada
- Europe
- Middle East
- Far East
- Latin America

## Memberships

- SECURITY INDUSTRY ASSOCIATION
- IMEI - MEXICO
- ALAS –LATIN AMERICA

## Client List

Our Security Systems have been used all over Europe, North America, and Latin America. The flexibility provided by our controllers and the software allows us to provide customization of our system with great ease. As a result, we have managed to do many custom jobs as well.

ATI does not deal with the end user directly. However, upon request will provide a list of sites where our systems have been used.

## Technical Support

At ATI we take pride in providing technical support to our integrators, and end –users as required and needed. ATI has its own team of engineers who are there to provide you technical support 24 hours of Day all year around.
