

AMC-2 Money Clip

The ATI AMC-2 money clip is designed for installation in cash register, cash boxes, and at teller's windows. The AMC-2 employs a quiet yet highly developed reliable switch mechanism that insures sending an immediate alarm signal when triggered and connected to a central station.

| • Cord Max. Length: | 16" |
| • Operating Temperature: | -40°F ~ 257°F (-40°C ~ 125°C) |

AMC-2 Money Clip

OPERATION:

Two bills are placed under the clip section of the AMC-2. Additional bills are placed on top of these bills. Bills may be removed in a normal manner as long as the bottom two bills are not removed from the money clip. When the bottom bills are removed, the AMC-2 will send a signal to the protective holdup circuit of the either Burglar contact panel or 24 hour hold up panel that will send the immediate signal to the police or the central station.
